

Botanical Name: *Convolvulus cneorum*

Common Name: Bush Morning Glory

Family: Convolvulaceae

Habitat: Sandy, rocky hillsides or plains

Native Distribution: Mediterranean

Elevation: Up to 2,500 ft

Hardiness: 15°F

Type: Evergreen

Size: 2' tall x 4' wide

Shape: Mounding

Growth Rate: Fast

Flowers: White or pink-tinged funnel-shaped flowers with yellow throats

Bloom Season: Spring to early summer

Fruit: N/A

Foliage: 1-2" soft, silvery-grey lance-shaped leaves

Exposure: Full/reflected sun

Shade: None

Water Requirements: Very low

In the Landscape: *Convolvulus cneorum* works well on sandy mounds or around pools or patios in Phoenix landscapes, or in parking lots, medians and other commercial applications. Minimal litter, low maintenance.

Wildlife: Attracts birds, bees, butterflies and moths.

Other Stuff:

- *Convolvulus cneorum* prefers well-draining soil or mounded soil where water can run off.
- Bush Morning Glory does best with some shearing every couple of years to keep the plant from getting too leggy.
- Plant Bush Morning Glory where it will get ample sun; filtered or part sun may cause the plant to become leggy.
